Addendum B - Covid-19 Vaccination NIMS

1. Overview

This Addendum sets out the additional work for the NIMS vaccination reporting data flows, and includes:

- COPI Notice to NHS Digital – 17 March 2020
- NIMS COVID-19 Vaccination Reporting - Functional Specification Document
- Other local documents supporting the work

This Addendum should be read in conjunction with the:

Cheshire and Merseyside Health and Care Partnership:
Workstream: Combined Intelligence for Population Health Action (CIPHA)
COVID-19 Intelligence

- Data Sharing Agreement (Tier Two)
- Data Protection Impact Assessment (DPIA)
- Addendum A - Flu and Pandemic Covid-19 Vaccinations

2. Lawful Basis

The COPI Notice, under Regulation 3(4) of the Health Service Control of Patient Information Regulations 2002 - **COPI Notice 20 March 2020** sets out:

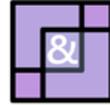

- Delivering services to patients, clinicians, the **health services and adult social care services workforce** and the public about and in connection with COVID-19, including the provision of information, **fit notes** and the provision of health care and adult social care services;

N.B. COPI Notices have been extended until the end of March 2021 to help give healthcare organisations and Local Authorities the confidence to share the data needed to respond to COVID-19.

The common law duty of confidentiality is met by the public interest. The legal gateway is the COPI Notice.

In addition, GDPR is met by:

Processing Personal Data - Article 6

6(1)(e) Necessary for the performance of a task carried out in the public interest or in the exercise of official authority vested in the controller

Processing Sensitive Personal Data – Article 9

9(2)(h) Necessary for the reasons of preventative or **occupational medicine**, **for assessing the working capacity of the employee**, medical diagnosis, the provision of health or social care or treatment or management of health or social care systems and services on the basis of Union or Member State law or a contract with a health professional

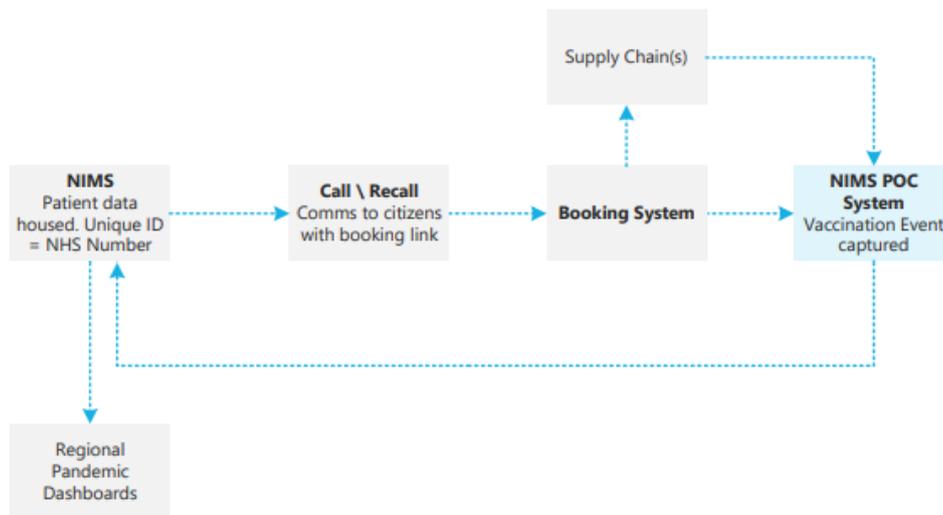

9(2)(i) Necessary for the reason of public interest in the area of public health, such as protecting against serious cross border threats to health or ensuring high standards of healthcare and of medicinal products or medical devices.

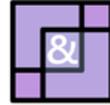

The highlights in **yellow** show how COPI and GDPR link to the workforce in this instance, and in **green** the link that staff are well enough to work, as the employer owes their staff and the wider workforce a duty of care for health and safety provision during this global pandemic.

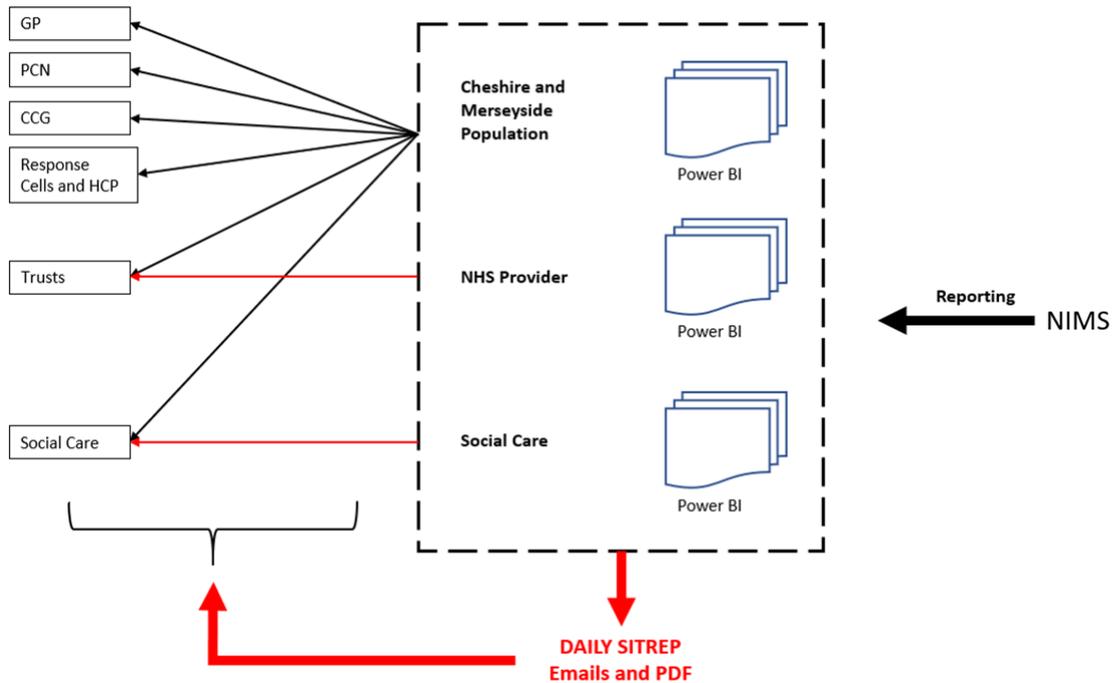

3. NIMS Data Flows

The Simply Book App and NIMS App use the following data flow, the example below shows 'Pandemic Vaccination' for PCN Non-Roving Service Model – this supports COVID vaccination pathway for all PCN cohorts that will not be serviced via a Roving Model.

8. Reports Overview

Cheshire and Merseyside Health and Care Partnership

<https://www.cheshireandmerseysidepartnership.co.uk/about-us/>

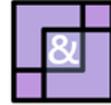

Combined Intelligence for Public Health Action (CIPHA) programme progresses to second phase

<https://www.cheshireandmerseysidepartnership.co.uk/news-and-publications/combined-intelligence-for-public-health-action-cipha-programme-progresses-to-second-phase/>

Significant progress has been made to ensure that Cheshire and Merseyside's Combined Intelligence for Public Health Action (CIPHA) dashboard is operational before the winter period.

The data and intelligence dashboard, which was commissioned by the Hospital and Out of Hospital Cells and funded by NHSX, will provide an integrated and shared intelligence base to support partners across the region when managing COVID-19 outbreaks.

The dashboard will monitor the incidences of cases and mortalities in near real time across acute, community mental health and local authority services whilst also monitoring and reporting on the capacity in the system to handle the demand of a second surge, should one occur.

It will be an important element of managing outbreaks in the region and will support both cells, Public Health England, Local Authorities, the NHS and CCGs to manage the response on a strategic level.

The main sources of data that inform this dashboard include all providers in Cheshire and Merseyside, national data sources and testing centres in the region.

Over the past few months, the project has met many milestones, including:

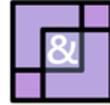

- Established governance, with the creation of a Board, programme team and workstream leads
- Enacted a detailed five-week delivery plan, with the first phase of this now complete
- Engaged with partners through various workshops and meetings (e.g. (COVID-cells, clinical informatics Group, GPs, NWAS, NHS Provider Trusts, LMCs, digital leadership community, Local Authorities, Public Health, labs and NPEX, IG groups and leads and The University of Liverpool)
- Developed a target operating model – including initial use cases covering epidemiology and capacity and demand planning
- A robust data sharing agreement in place (with contributions from stakeholders) with most of the main providers signed up and nearly half the GPs.

Having established the platform and initial outputs the programme is now moving into the second phase. During the next phase, the programme will prioritise on creating a clinical outcomes radar, integration with public health reporting and a renewed focus on reporting of vaccinations.

Further updates about the progress of this project will be shared in upcoming editions of Connect, the Partnership's stakeholder newsletter.

The following summarises the reports that will be available: -

- Workforce and vaccination report that enables a user to drill from an organisation to a department and see aggregate level data on % staff vaccinated
- COVID-19 vaccination reporting similar to the Flu vaccination report which enables a view on population by CCG/Practice/PCN and local authority/ward
- Invitation for vaccination – this report will provide information on who has been

13. Email: NWICC 4493 Lateral Flow Reporting

From: EPRRNW, England (NHS ENGLAND & NHS IMPROVEMENT - X24)

Sent: 26 November 2020 17:58

Subject: NWICC 4493 Lateral Flow reporting

Dear all,

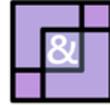

Given that there have been a number of conversations around reporting for the Lateral Flow testing it was felt that it would be helpful to share the current expectations for reporting. We are currently asking for 3 regular reports, each for a different purpose – apologies it has ended up slightly fractured, but hopefully you can appreciate why.

1. **Daily SitRep** – This is based on the letter from 24th November, and is a daily return looking at distribution of kits, participation, and the impact on workforce (NHSStaffLFT attached). We recognise that there are fields in here that will be 0 or unknown – for example we are aware that the distribution method in some Trusts means that there is not a point of refusal for staff, and that data around first day absence or return would not be captured. This has been fed back to the national team, but in the meantime please complete this as well as you can. This is to be **returned by 2pm daily** through the portal.
2. **Weekly Portal submission** – This is the weekly submission to be completed on Fridays (COVIDReportingTemplate attached), showing the staff testing information for the previous week. This will have the information by staff member, and will contain information on e.g. demographics. This will be reported on nationally, with the slight delays in production this entails. This is to be **returned by COP Friday** through the portal.
3. **Weekly headline summary** – We are required to report to IMT on a weekly basis on Friday afternoon – this will be the first view that regional colleagues have of rollout and positivity, and so may inform early investigation and decision making. I have done some work with the leads from the Early Mover sites to make sure we are asking for information that can be easily pulled out of the two reports above and the data you are capturing, so I don't believe this is a significant additional burden. This covers kit distribution, Lat Flow results and results compared to PCR. This is to be returned to englandcm@nhs.net and miles.taylor@nhs.net by **3pm on Fridays**.

15. Honorary Contracts

Honorary Contract arrangement for access to Pillar 2 Testing Data for Liverpool University

At its meeting on the 4th November the DAAG approved the attached process for accessing pseudonymised data for CCG's and Local Authorities. We agreed as part of this that any requests for data that were outside of these two organisations would be a request to the DAAG Group.

The mass testing programme has been implemented in Liverpool and CIPHA has secured the DSA – embedded below - to allow for the patient level data to flow from DHSC into CIPHA.

A request came from Gold Command for analysis of this dataset. A subsequent request was then received from Iain Buchan, Executive Dean, Institute of Population Health, University of Liverpool, to obtain access to the pseudonymised data flow to undertake this analysis. Iain is an employee of Liverpool University which is not listed in the DSA with DHSC for the Pillar 2 testing data (embedded below). Therefore we have issued Iain Buchan an Honorary Contract with Liverpool CCG in order that he can gain access to this pseudonymised dataset – embedded below.

The Data Sharing Register– embedded below - reflects this project.

Data Sharing
Agreement between

18. Reporting to Public Health England (PHE)

PHE are expecting an ImmForm submission fortnightly from every Trust. We have agreed that we want to:

- Avoid Trusts implementing a separate process for reporting to PHE
- Use a single source for the data / performance reporting

It therefore is our recommendation and makes more sense for PHE to receive their data directly from NIMS database and via our existing reporting channels.

We have therefore added PHE into this Addendum B. This will cover Cheshire and Merseyside to permit the sharing of data to PHE, under COPI.

PHE will need to apply for access to the NIMS.

We will then add PHE to our distribution list for Covid Daily Performance Dashboards (circulation list)

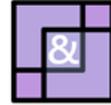

We will keep everyone as necessary apprised with updates on dashboard and reporting progress / status.

PHE require us to see up at an aggregate level Cheshire and Merseyside population uptake (by GP practice and by Council Ward) and on-board the relevant people through our existing process.

If PHE wish to see reports for employees of Trusts/LAs then these are at staff identified level and will go to individual organisations from NIMS through power BI dashboards. We don't get these centrally because of the PID nature of the data.

We will work with PHE to establish the names and contact details of the people to be on-boarded to receive staff identifiable data.

Consequently, we have included PHE to this Addendum B, for transparency.

to view vaccination status within their organisation. The report allows drill down to person identifiable level and person details can be exported.

Users are able to identify the vaccinated and not vaccinated population in their workforce. The individual records can be exported for separate analysis.
